Education

Washington University in St. Louis St. Louis, MO

Bachelor of Science in Computer Science and Mathematics | GPA: 3.75/4.0 *May 2027*

- **Honors:** ISEF Finalist (2022); Dean's List; Eagle Scout | **YC Startup School** 2026 (SF)
- **Coursework:** Intro to AI, Cloud Computing with Big Data Applications, Systems Software, Analysis of Algorithms, Concurrency & Memory-Safe Systems (Grad), Theory of Parallel Systems (Grad)

Experience

Northstar Robotics Sept. 2026 – Present

Robotics Software Engineer *Remote, SF*

- Shipped a multi-relay supervisor for robot teleoperation and data collection; built reusable installers, configuration tools, and hardware diagnostics to support partner deployments.
- Built a reliable recording pipeline that raised three-camera capture from 7.5–11.6 to 30 fps; all 29 test recordings reached Azure within 9–36 seconds of stopping, with synchronized video, joints, and actions.
- Resolved production camera-session leaks and network dropouts; added automatic reconnection and recording-upload recovery after restarts to support remote operators.
- Built a Python/Modal pipeline to prepare robot demonstrations for policy fine-tuning on A100 GPUs, synchronizing video and actions, rejecting incomplete episodes, and holding out sessions for validation.

Capital One June 2026 – Aug. 2026

Software Engineer Intern *McLean, VA*

- Built a FastAPI app on a 5-person team to replace manual CIDR and rule lookups, using PostgreSQL GiST indexes for subsecond searches across 1.5M+ security groups and rules.
- Built an in-app chat integration to eliminate separate API token provisioning by wrapping Claude Code in a driver; adopted by the team with expanding use across the organization.

Tesla Jan. 2026 – May 2026

Software Engineer Intern *Fremont, CA*

- Led development of an AI agent platform for internal data retrieval and workflows using Python, FastAPI, LangGraph, and 12+ tools; adopted by billing, support, and application teams.
- Automated energy lease transfers and account updates for Tesla's entire U.S. energy customer base through asynchronous, event-driven workflows across 10+ .NET microservices.
- Led a cross-team authentication rollout to scope AI tool access to user accounts using Cerberus.
- Tuned latency against SLA targets with tracing, APM, and load tests; deployed to Kubernetes via Jenkins.

Spectrum May 2025 – Aug. 2025

Software Engineer Intern *St. Louis, MO*

- Built a Python/AST dependency analyzer, saving 2–4 validation days per refactoring cycle.

Selected Projects

Tandem – AI Agent Orchestration | *Go, TypeScript, MCP, SQLite* May 2026 – Present

- Built an agent-orchestration platform with MCP integration, a durable task queue, and a live web interface where users review plans, approve work, and track execution across parallel agent sessions.
- Implemented atomic task claims to prevent duplicate assignments, heartbeat-based claim expiry to recover stalled work, and WebSocket updates that expose agent progress and results to users.
- Packaged the platform as a single binary with an embedded UI and SQLite; automated installation, MCP registration, and startup so new projects can reuse the same orchestration infrastructure.

Delivery Robot Platform | *Go, Kafka, gRPC, WebSockets* Aug. 2025 – Present

- Lead a 20-person team building a campus delivery platform; developed Go microservices for fleet coordination, a JWT authentication service, and robot command interfaces, with Docker and GCP deployment.

Technical Skills

Languages: Python, TypeScript, Go, SQL, C#, C++, Java, JavaScript
AI & Applications: LangGraph, MCP, FastAPI, React, Next.js, Node.js, PyTorch
Data & Integrations: PostgreSQL, MongoDB, SQLite, WebSockets, Kafka, gRPC, .NET
Deployment: Linux, Docker, Kubernetes, Azure, GCP, Modal, Jenkins, GitHub Actions
